

Research Objectives

1. How does plant performance and yield differ between the two environments?
2. How can we utilize drone imaging to investigate this?
3. What is the relationship between our drone data and yield?

Reflection

- Connecting with and learning from other researchers
- Better identifying my personal research interests
- Knowledge and experience in programming/coding
- Practice in analyzing and writing scientific literature
- Preparation for my next role: The BioGEM Program at KU!
